Dear Denise, Ryan, and George,

It was good to see you yesterday. As we discussed, I looked more closely at the attached NRC document that John gave me. It appears to have been sent to Tetra Tech. Therefore it appears it would be a public document. Therefore I am sending it to you. I have also left a message with Richard Chang to confirm.

Here is an excerpt from the last page:

"4. INDEPENDENT AND CONFIRMATORY MEASUREMENTS:

On March 12, 2014, an inspector from the California Department of Public Health obtained soil samples from HPNS. The samples were "split" and independently analyzed by the Navy. Composite soil samples were taken from soil piles 2, 3, 4, and 7 in Parcel C. This was soil from the chemical remediation in Parcel C scheduled to be transported to a facility that accepts chemically impacted soil. The NRC inspector reviewed the results and noted that the soil analysis demonstrated that no radiological contamination was present."

I look forward to getting the flow chart that describes CDPH's and DTSC's roles in the review process.

Thanks!

- Lily
